

ePSA™

Electronic Prostate Specific Awareness

Tewari Lab, Icahn School of Medicine at Mount Sinai

Know your baseline PSA risk before your next urology visit

ePSA is an easy-to-use educational online tool that helps men understand their personal risk for prostate cancer before they even get tested. A short set of guided questions gives you a personalized picture of your prostate health in just a few minutes, grounded in AUA and NCCN screening standards.

Why ePSA

Adaptive assessment

Each response reshapes what comes next, so your results reflect your own health picture.

Clinically grounded

Backed by trusted clinical research and Mount Sinai's own patient data.

Personalized for you

Results adapt to where you are in your journey: pre-PSA, post-PSA, or post-MRI.

Private by design

No account required. Use on your device, or save anonymously with a session key.

How it works

1

Tell us about yourself

A few quick questions about your health and lifestyle.

2

Add clinical data (optional)

Include your PSA level and MRI PI-RADS score if you have them, to refine your estimate.

3

Get your risk profile

Receive a plain-language risk tier and printable summary for your next doctor visit.
